

Steelcase Flex Dock

Now your team can charge, create and share – faster and easier than ever with Steelcase Flex Dock. Featuring Thunderbolt™4 technology, Steelcase Flex Dock integrates with Steelcase CF Series monitor arms to provide immediate connection to power, data and display while keeping cords and cables out of sight. Step up with a laptop, plug in and you're on.

Phone booths are incredibly popular spaces for quick call privacy instead of using the stairwell or corridors or worse still walking around the office and annoyingly hovering around other people's desks.

Quick Connection

Steelcase Flex Dock provides convenient desktop power in a compact design, plus it can support up to two 4k monitors – so plugging in and sharing ideas is supremely quick and intuitive. Connect a laptop, phone or tablet. A keyboard, mouse or camera. You decide what goes on the worksurface. The rest is clean simplicity.

Multiple Ports

Steelcase Flex Dock offers a powerful set of ports – including USB and Thunderbolt™ – for high-speed charging and quick connection to hardwired data, monitors, and peripherals. It's made for fast-loading, smooth-streaming, media-rich work. And it goes the distance, adapting to new tech to future-proof your investment.
